

AKM 10-95

Activated carbon adsorber for the efficient purification of compressed air

AKM 10-95 activated carbon adsorbers purify pre-dried, industrial compressed air reliably and efficiently down to a remaining oil content of 0,003 mg/m³. The units are constructed in a compact manner and designed to be free-standing with built-on after filters. They are equipped with built-on pre- and after filtration and are sized for volumetric flows of up to 940 m³/h (suction capacity of the compressor referring to a compression of 7 bar_e). Pre-dried compressed air flows from top to bottom through a single vessel containing high-quality activated carbon: Any remaining oil-aerosols and oil-vapours, including odours and tastes, are removed by the active surface area of the highly-porous activated carbon to produce high-quality, clean compressed air.

Finally, the treated compressed air exits via the validated GL after-filter into the downstream compressed air network.

Using an oil-indicator tube supplied as standard, quality checks can be carried out periodically. The lifetime of the activated carbon filling can vary and is dependent on the contamination type and quantity and the relative humidity of the compressed air. Customary lifetimes for industrial applications range from 8 to 10.000 operating hours, which can be verified using a colour-change indicator to simplify planning requirements.

Performance overview:

Model	Nominal pipe size ¹	Nominal flow rate ²
AKM 10	1	105
AKM 15	1	145
AKM 20	1	200
AKM 25	1 1/2	255
AKM 35	1 1/2	350
AKM 45	1 1/2	420
AKM 60	2	620
AKM 75	2	750
AKM 95	2 1/2	940

1: Nominal pipe size is accordance with DIN ISO 228 (BSP-P).

2: Volumetric flow rate in m³/h, relating to 1 bar_a and 20 °C. Subsequently compressed to 7 bar_e, at 35 °C inlet temperature to the adsorber. Relative humidity < 20 %.

Where minimum operating pressure and inlet temperature deviate, the actual flow rate should be multiplied by the correction factor f to arrive at the required nominal flow and thus the correct size of dryer.

Scope of supply:

Activated carbon adsorber - ready for installation, including oil-indicator and GL after filter.

Operating range

Site selection	frost-free indoor installation in a non-hazardous environment
Ambient temperature	1.5 to 50 °C
Compressed air inlet temperature	25 to 50 °C
Operating pressure	5 to 16 bar _e
Medium	Compressed air and gaseous nitrogen

Materials of construction

Filters	See product-specification regarding GL filter ref: ZL
Pressure vessels	Normal steel, welded
Piping	Steel, zinc-coated
Seals	NBR
Adsorber filling	100 % Activated carbon

Pressure vessel approvals

EU	Approval for fluid group 2 in accordance with the Pressure Equipment Directive 97/23/EC, Module B+D: Product range AKM10 to 35, in accordance with category II; Product range AKM 45 to 95 in accordance with category III.
